

CSE 115A PRODUCT
PRESENTATION

SlugShare

Helping UCSC students share unused dining points with peers who need them most.

Samarth Shastry, Nithin Danday, Jasdeep Matharu, Jordyn Salazar, Hannah Dinh

Product Owner: Hannah Dinh

THE PROBLEM

58%

of UCSC students experience low food security.

Unused dining points often disappear at the end of a term, while students who need meal support have no simple, trusted way to connect with those extra resources.

SlugShare bridges need and surplus

How SlugShare changes the experience

Student with extra points

Posts available dining points in a clean, fast flow.

Donate

Student seeking support

Finds help nearby with a trusted handoff and clear status.

Receive

A campus resource that should be expiring quietly becomes visible, shareable, and immediate.

SYSTEM OVERVIEW

Architecture

SlugShare connects the student app to secure auth, server logic, and a persistent data layer.

Technologies

Grouped by role so the stack is easier to scan during the presentation.

Frontend

**Next.js, React,
Tailwind CSS**

Backend + Auth

**Node.js,
NextAuth.js**

Data Layer

**PostgreSQL,
Supabase, Prisma**

Workflow

**TypeScript, GitHub,
Vercel, Actions**

Quality

**Vitest + automated
checks in workflow**

Project Management

A sprint-based workflow with lightweight rituals, visible tracking, and enough flexibility for a student team.

4 two-week sprints

Sprint planning + review meetings

**15-minute standups
3 days a week**

Jira board, burnup chart, planning poker

Hybrid collaboration when needed: in person, remote, or Discord-based check-ins depending on availability.

What Worked and What Hurt

What Worked

- Learning GitHub collaboration on a larger team
- Using Jira for planning and visibility
- Automated deployment with Vercel
- AI tools that sped up implementation
- Automated testing with GitHub Actions

Friction

- Merge conflicts
- Balancing the project with other classes
- Scheduling conflicts across the team

The strongest tools were the ones that reduced coordination overhead and kept everyone moving.

Lessons and Challenges

Lessons Learned

- Test merges locally before merging
- Use branches
- Keep documentation and user stories clearer
- Separate concerns early to move faster

Biggest Challenges

- Learning a new stack quickly
- Communication and scheduling
- Getting everyone onboard with the tech
- Keeping standups concise and useful

Paired work helped reduce onboarding friction and sped up knowledge transfer.
