

Release Summary - CSE 115A - Software Methodology

SlugShare

Jasdeep Matharu, Samarth Shastry, Nithin Danday, Jordyn Salazar, Hannah Dinh

Completed: March 20th, 2026 | Revision v1.0

- **Key user stories and acceptance criteria:** Acceptance Criteria - SlugShare

Sprint 1

- As a *user*, I want a dashboard where I can see my points balance, a button to view other people's requests, a button to make requests (8pts)

- Acceptance Criteria

- The dashboard can display a point balance.
- The dashboard contains a button that navigates to the request list page.
- The dashboard contains a button that allows the user to create a new request.
- The dashboard loads automatically after the user logs in.

- As a *user*, I want to sign up and log in so I can securely access the application (5pts)

- Acceptance Criteria

- New users can create an account using the signup page.
- Users can log in with a valid username/email and password.
- The system shows an error message if login credentials are incorrect.
- After logging in successfully, users are redirected to the dashboard.

- Sprint 2

- As a *requester*, I want to see food locations and their prices and hours of operation. (1pt)

- Acceptance Criteria

- The system displays a list of campus dining locations.
- Each location shows its hours of operation.
- Each location shows food prices or price ranges.

- As a *donor*, I would like to be able to generate a QR code linked to my Slugpoints to share with *requesters* (8pts)

- Acceptance Criteria

- Generated QR code
- The QR code is unique to the donation.
- Requesters can scan the QR code to spend points.
- The QR code is only accessible after a request has been accepted.

- As a requester, I want to indicate whether I'm okay meeting in person or receiving a QR code (3tps)
 - Acceptance Criteria
 - When creating a request, users can choose "In Person", "QR Code", or both.
 - The selected option is visible to donors viewing the request.
 - The system stores the requester's preference with the request.
- Sprint 3
 - As a *donor* I would like for the dashboard to have an accurate up to date showing of how many points my account has (3pts)
 - Acceptance Criteria
 - The dashboard displays the current SlugPoints balance.
 - The balance updates after donations or spending.
 - The displayed balance matches the system's stored value.
 - As a *requester*, I want to be able to see the GET QR code after having a request accepted (5 points)
 - Acceptance Criteria
 - Once a donor accepts a request, the requester can access the QR code.
 - The QR code is displayed on the request details page.
 - The QR code can be scanned to complete the transaction.
- Sprint 4
 - As an *admin*, I want to view all requests to monitor system usage. (8pts)
 - Acceptance Criteria
 - Admin users can access a page showing all requests, even ones that have been finished and deleted.
 - The page displays request details (requester, points requested, location).
 - Admins can see the status of each request (pending, accepted, completed)
 - As a donor, I would like my QR code to have a spending limit, time limit, and for the ability to be pulled (5 points)
 - Acceptance Criteria
 - This feature is only available when a Get account is connected
 - There should be an input field for time limit
 - There should be an input field for the spending limit

- There should be a button for pulling all requests
- All updated inputs are visible under the GET user information
- QR codes are auto pulled when the timer runs out, users balance gets to low, or user clicks pull qr code button.
- **Known Problems:** List the major bugs (you can reference your Test Report), omissions (missing functionality, edge cases that are not handled), design shortcuts (e.g. hard coded data), etc.
 - Ability to filter by preference to meet in person or qr code not implemented.
 - There are some user interactions that are not restricted at the moment. Those acting in bad faith can accept as many requests as they want and set a short time limit for their qr code, or say that they want to meet in person to swipe someone in and not commit to that. Users can also make as many requests as they want filling up the requests.

Product Backlog: Provide a list the high priority user stories and bug fixes that can serve as a guide for a follow-on project.

- Implement meet in person or qr preference filter
- As an admin I want the ability to disable accounts.
- Implement restrictions on the number of requests that can be made
- Implement a report system so users acting in bad faith can have their account disabled by admin

Note: There will be no penalty for system failures during the project review that are due to known problems.
